

LCA in industry - eco-innovation

Christian Bauer, SIG International Service GmbH, Germany

Mikolaj Owsianiak, Technical University of Denmark, Denmark

Having generated incremental changes (e.g. through LCA in products, cleaner production, etc.) companies are now looking beyond their own gates through an eco-innovation approach and related management tools that enable leveraging bigger potential benefits shared across the value chain.

This session is focused on applications of LCA as an entrepreneurial tool for eco-innovation, i.e. on case studies presenting benefits of LCA applications in the areas of product and process development, market approaches and organisational structures (e.g. new interactions with value chain actors).
