

## **Developments in LCA methodology: increasing the reliability, simplicity and applicability**

*Adisa Azapagic*, University of Manchester, United Kingdom

This session focuses on the application of emerging methods and new approaches for sustainability assessment such as IO-LCA, hybrid and streamlined LCA as well as the application of well-established methods for sustainability assessment in new combinations with other approaches. Examples of simplified LCI and LCIA, with a lower cost of their application while maintaining the reliability of the assessment results, are welcome as well.
